## **New One Trip IICL Shipping Containers: Your Guide to Expectations and Benefits**

New one-trip shipping containers may exhibit minor imperfections like dents, dings, and scratches, which are the natural outcome of their extensive journey through shipping and handling processes. These new one-trip containers are produced in Asian factories and subsequently transported to our global depots. To ensure competitive pricing for our customers, we strategically load these containers with cargo solely on one occasion. This approach helps us minimize the expenses associated with container repositioning and enables us to offer cost savings that are passed directly to our valued customers.

These containers are classified as IICL grade, indicating that they adhere to strict industry specifications for structural integrity, durability, and overall condition. This ensures that our customers receive containers that not only meet their shipping and storage needs but also meet globally recognized standards for safety and reliability.

## When you receive a new one-trip shipping container, you can expect the following:

1

**Excellent Condition:** One-trip containers are nearly new and in excellent condition both inside and out. While they may have minor dents or scratches from their journey, they are considered to be in like-new condition.

2

**Minimal Wear and Tear:** Unlike used containers, one-trip containers have minimal wear and tear. They haven't been exposed to harsh weather conditions or extensive use, making them a great choice for those who want containers in better condition.

3

**Longer Service Life:** One-trip containers have the potential for a service life of 10-20 years. They depreciate less within their first five years compared to older containers, making them a cost-effective option for long-term storage or shipping needs.

4

**High Quality:** New containers, including one-trip containers, are inspected to meet industry standards such as the Cargo Worthy certification. This ensures that they are structurally sound, secure, and suitable for international shipping.

5

**Lower Risk of Maintenance Issues:** Being newer, one-trip containers are less likely to have maintenance issues or structural problems. This reduces the need for frequent repairs or modifications, providing a hassle-free storage or shipping solution.

6

**Pricing and Availability:** It's important to note that prices for shipping containers can vary based on factors such as size, location, and market conditions. To get accurate pricing and detailed specifications, it's advisable to consult with our container experts.
