What to Expect from Used IICL Shipping Containers

In the realm of storage solutions and shipping, one-trip containers have emerged as a preferred choice for many businesses and individuals. Given their near-new condition and high-quality standards, they offer an excellent blend of affordability and durability. When these containers come with an IICL certification, it adds another layer of assurance regarding their quality and condition.

What is the meaning of the acronym IICL and how do IICL labels affect shipping containers?

The International Institute of Container Lessors (IICL) sets inspection standards for industries that use shipping containers. An IICL certification implies that the container meets the required quality and condition standards to be used for transporting cargo. While these containers are primarily used in shipping services, they also serve as a high-quality option for aftermarket storage applications.

Features of Used IICL Shipping Containers

- 1** Guaranteed wind and water-tight
- 2** Great for storage
- 3** Solid flooring
- 4** No repair necessary due to structural issues
- 5** Certified for ocean vessel shipment
- 6** Easily swinging doors with lockbox

When you receive an As-Is Shipping Container for sale, you can expect the following:

- 1 Signs of Wear and Tear:** The container will likely show signs of use, including scratches, dents, and possibly rust. The flaws show its past and hard work, giving it personality and proving it can last a long time.
- 2 Functional Doors:** The double doors should still be functional, although they may require additional effort to open and close. The container has been used before and proven to be reliable in tough conditions. Rest assured, with a little extra push, you can access your belongings securely.
- 3 Interior Condition:** The interior might have some stains or minor damage to the plywood floor or walls. These blemishes are a reminder of the container's history and the various items it has housed. However, they do not compromise its functionality or the ability to store your goods safely.
- 4 No Repairs:** "As Is" implies the container has not been repaired or refurbished after its last use. This transparency ensures that you are aware of its previous state. Although it has not undergone any repairs, it remains structurally sound and ready to serve its purpose.
- 5 Weatherproof:** Despite their used condition, these containers are typically still weatherproof and able to protect contents from the elements. The strong corten steel materials of the container keep your things safe from rain, wind, and other weather conditions. Trust in its ability to maintain the integrity of your stored items.
